(a) Height of dam, 70 feet; length of dam at top, 960 feet; length of dam at bottom, 60 feet; material used in construction (wood, earth, stone or concrete)

described on the sheet attached hereto and made a part hereof. The permit is, however, granted with the knowledge that applications Nos. 1760 and 1803 each cover a portion of the same land, which applications are this day allowed. The total amount of water granted in permits Nos. 1482 and 1803, both from Rock Creek, is figured at the rate of four (4) acre feet per acre for the total area involved, so that permission is granted to store 48487.2 acre feet of water, from Rock Creek in the event that no water whatever is available for storage from Willow Creek under permit No. 1760. However, the total amount of water which may be stored from the two sources involved must not exceed four (4) acre feet per acre for the total area of land involved in the three permits, namely 50187.2 acre feet for 12546.8 acres. The applicant is hereby required to definitely segregate the areas of land which obtain water for irrigation purposes under each of these three permits at the time of filing proof of beneficial use of water.

It is hereby stipulated that the applicant accepts this permit with the full understanding that the diversion or storage of water will be discontinued immediately upon notice from the State Engineer that the water is required for use of prior appropriators on the stream system. A standard headgate and weir must be installed at or near the point of diversion to facilitate the measurement and control of water. The State reserves the right to regulate the period during which water may be stored and the use thereof at all times.

Full and complete plans and maps of the project must be forwarded to the State Engineer on or before July 19, 1917.
