This permit is issued subject to all prior rights on the source. The amount of water herein granted is placed at the full statutory allowance of 2.0 c.f.s. for the total acreage of land proposed to be irrigated notwithstanding the fact that a portion of such land has already been granted a water right under Permit No. 3864, so that such amount of water may be diverted from the source herein described and used in the event that there is no water whatever available from the source under Permit No. 3864. However, the total amount of water used at any time from both sources named in the two permits shall not exceed the statutory allowance of 2.0 c.f.s. for the area of 200 acres of land duplicated in the two permits. The land for which proof of beneficial use of water is filed under Permit No. 3864 shall automatically be eliminated from any water right under this permit upon the filing of said proof under Permit No. 3864, and the amount of water herein granted decreased accordingly.

A substantial headgate and weir must be installed and maintained at or near the point of diversion to facilitate the measurement and control of water. The State reserves the right to regulate the use of the water herein granted at any and all times. It is distinctly understood that the applicant agrees to the terms herein contained.
