Remarks: The actual government survey of said lands has been made,
Append a sheet if necessary

but said survey has not been approved. The descriptions of the lands given herein are therefore not official, but are in accordance with the actual survey on the ground.

(15) *The maximum acreage irrigated in any year was* 77 *acres.*

(16) *The water claimed has (~~has not~~) been used for irrigation each and every year since the right was initiated.*
Strike out one not wanted

(17) *The years during which no water was used for irrigation or during which the full water right was not used were* none

If water was not used, or used in reduced quantity at any time, full information as to causes and duration of non-use should be given, appending a sheet if necessary

(18) *The claimant's water right ~~was~~ (was not) recorded in the office of the County Recorder of* ..... *County, said record being at page* ..... *of Book* ..... *of* ..... *, and being a claim for* ..... *of water for the irrigation of* ..... *acres of land in the following legal subdivisions:* .....

NOTE—Failure to record in the county in no way invalidates a water right, but if ditch or right was so recorded, supply full information under (19)

(19) *The map provided by the State Engineer and attached hereto as a part of this proof is hereby accepted as correctly showing the ditch lines or irrigation works diverting or conveying the water claimed and the lands irrigated.*

(20) *Water from the source given and through the works described is also used for the following purposes other than irrigation:* domestic and watering livestock.

(21) *The character of the soil is* sandy loam (Sandy, gravelly, loam) *The soil needs* ..... *acre-feet per annum to properly irrigate the crops. A continuous flow of* 2.6 *cubic feet of water per second, during the irrigation season of* 7 *months, is needed to irrigate each 100 acres of land.*

(22) *Remarks:* The soil is shallow, varying from one and a half to three and one-half feet in depth and is underlaid by a stratum of impervious hard pan. The surface and the hard pan slope upward on both sides of the channel of Lake Creek which is the natural stream flowing from the said Spring. The water used for irrigation percolates rapidly through the soil to the hard pan and then drains along the top of the hard pan back into the channel of Lake Creek. This condition results in the requirement of a large quantity of water for irrigation, but on the other hand it assures the relatively prompt return to the stream of substantially all of the water used.

Subscribed and sworn to before me this 17th *day of* September, *19* 19
