(21) The character of the soil is sandy loam (Sandy, gravelly, loam) The soil needs ..... acre-feet per annum to properly irrigate the crops. A continuous flow of one cubic feet of water per second, during the irrigation season of ten months, is needed to irrigate each 100 acres of land.

(22) Remarks: It requires at least 1/2 cubic-second- feet to irrigate the lower field. The water for the upper and middle fields rises and sinks on those fields during the productive season but does not reach the lower field during the irrigation period.
