acres of land in the following legal subdivisions:.....

NOTE—Failure to record in the county in no way invalidates a water right, but if ditch or right was so recorded, supply full information under (19).

(19) The map provided by ~~the State Engineer~~ L.H. Taylor, State Water Right Surveyor and attached hereto as a part of this proof is hereby accepted as correctly showing the ditch lines or irrigation works diverting or conveying the water claimed and the lands irrigated.

(20) Water from the source given and through the works described is also used for the following purposes other than irrigation: Domestic Use and Watering Stock throughout the year.

(21) The character of the soil is gravelly & Sandy loam. (Sandy, gravelly, loam) The soil needs 4.5 acre-feet per annum to properly irrigate the crops. A continuous flow of 1.00 cubic feet of water per second, average during the irrigation season of 7½ months, is needed to irrigate each 100 acres of land.

(22) Remarks: The supply of water is extremely variable being normally from 2 to 4 second-feet in March and April but getting very low, rising and sinking at intervals on claimant's property in the early summer and fall, therefore a much larger flow is needed early in the season both to furnish the required total supply and to furnish the necessary irrigating head.
