ATTACHMENT FOR PROTEST OF APPLICATION 72330

1. This application is for municipal use. The point of diversion for the underground water source is not within proximity of a municipality.

2. This applicant cannot put the water to beneficial use. The applicant does not possess a Right of Way across public lands or an easement to transport water from the underground source to a municipality.

3. The hydrologic balance of the basin would be altered. The applicant would need to transport the water outside of Basin 183 to put it to beneficial use as stated, creating conditions whereby surface waters, including the alluvial aquifer, would be depleted to provide deeper recharge.

4. The applications are for uses that are not in the public interest for Basin 183. Public land resources in the basin which are dependant on the present hydrologic balance would be negatively affected.

5. This application is one of 67 similar applications within the same 2 townships and all within Basin 183. The cumulative cone of depression created by concentrating so many wells pumping at the rates requested would have a severe drawdown affect on the alluvial beds presently supplying local water needs.

6. The deep carbonate aquifer is not vertically confined by a continuous aquiclude. There is a potential for the deep carbonate aquifer to be contaminated by waters from the alluvium nearer the ground surface.

7. The application is for the deep carbonate aquifer. This aquifer is not confined to the State of Nevada, and is not within the sole jurisdiction of the State of Nevada. Therefore, the Nevada State Engineer should deny the application.
