Material	Water Strata	From	To	Thickness

On December 5th through the 16th, 1995, 24 sampling points were drilled to a depth of approximately 5 feet, the soils encountered were a blackish silty sand and a blackish sandy clay. A one inch hydropunch was then driven to approximately 8 feet to obtain water samples. The sampling points were then abandoned by backfilling the sampling points with bentonite to approximately one foot below grade and then completed with concrete or native fill as required per waiver MO 2664.
