6. LITHOLOGIC LOG

Material	Water Strata	From	To	Thickness
Well depth was measured at 245.3 ft. Using a Mills Knife, casing was perforated every 2 ft. on opposite sides of the casing wall. Perforating was conducted from the top of the wire screen to the surface. A total of 135' of blank casing was perforated. Perforator was then removed and 240' of 1¼" tremme line was installed for grouting. We then pumped in 5 yds. of neat cement. There was also 59' of 2" gravel access pipe that was also filled with neat cement. After all was full of cement and the tremme pipe removed, the casing was cut off 3' below ground level and a cap welded to the top.
