6. LITHOLOGIC LOG

Material	Water Strata	From	To	Thickness
Measured depth of well before starting at 53'. Installed 1½" steel pipe and air-jetted debris from well to a depth of 61'. Attempted to advance pipe, but the hole would keep collasping and did not stay open. We determined that this was the bottom of the well. All we were getting from the well was coarse sand and fine gravel. We then mixed 6 bags of Portland Type II cement and approx. 40 gallons of water for the neat cement. After cement was mixed it was pumped from the bottom of the well to the surface through tremme pipe. After the tremme pipe was removed, the hole was then topped off. The well was constructed with 4" steel casing. Required approx. 5.3 cubic feet of grout
