6. LITHOLOGIC LOG

Material	Water Strata	From	To	Thickness
Measured depth of well at 164'. Bailed debris to 167' and could not advance any further. We were getting clay, silt and rock in our bailer. We decided that this must be bottom of well. We removed our bailer and installed 8" perforator and cut casing from 97' to 50' with 3 slots per foot. We tried to perforate in upper 50' but had difficulty in cuts because of cement seal. We removed perforator and installed tremme pipe to bottom of well and pumped approx. 6 cubic yards of neat cement.				
Recieved incorrect drillers log from Carson City on this well. The legal description has been changed on this report from what is on the intent card.
