6. LITHOLOGIC LOG

Material	Water Strata	From	To	Thickness
On this date we abandoned the 8" well by perforating from bottom to top with Mills Knife. We perforated at least 4 around at 1 foot intervals. Several times we were able to rip the casing for approximately 3-4 feet at several intervals as the casing was weak. We filled the casing with approximately 2.8 cu. yards of neat cement at 5.2 gallons per sack of neat cement. We used a pressure grout machine and tremie pipe. We also pulled a 6" pvc liner pipe from inside of the well that was from 3' to bottom. The pvc didn't extend past the bottom of the 8", just to the bottom of the well.
