TOTAL:		29.5 ACRES				

EXHIBIT "C"

This temporary application is being filed along with 9 others to transfer the consumptive use portion of the applicant's Carson River Claims to Mud Lake for storage purposes. Secondary applications will be filed in order to place the stored water to beneficial uses. The applicant intends to begin diverting the waters on April 1, 1994 (or as soon as possible thereafter). The water will be diverted at the proposed diversion point(s) as indicated in Exhibit "A".

The quantities and diversion rates of the water to be diverted will be in accordance with decreed practices and will be done on the 40% - 40% - 20% split basis as detailed in the transfer procedures outlined in Section II of the Thiel, Winchell & Associates report entitled Investigation of the Mud Lake Reservoir and Conveyance Methodology (pages 2 - 19) and submitted as an exhibit at the State Engineer's hearing on Applications 54729 through 54741, inclusive held on March 11, 1994.

The total combined duty of all 10 applications being filed by Aqueduct I, Ltd. is 1894.75 acre-feet. This represents the consumptive use portion of the claims being changed or 2.5 acre-feet per acre from 757.90 acres of water righted land.

A secondary purpose of the applications being filed by Aqueduct is to assist in the investigation and remediation of the structural integrity of the dam at Mud Lake. Testimony provided by the applicant at the March 11, 1994 hearing made reference to the fact that testing was being performed on the dam structure and that Peziometers were being installed to monitor any seepage through the dam.

By placing the additional 1894.75 acre-feet into Mud Lake on top of the decreed amount of 3172.00 acre-feet, sufficient water will be contained behind the dam to allow a thorough assessment of the dam's integrity which will then allow the applicant to proceed with whatever improvements/repairs may be necessary to the dam to insure its integrity. Dam safety is an area of concern to the State Engineer as provided for in NRS 535.030. Allowing the additional water to be transferred into Mud Lake, will assist the State Engineer in carrying out the provisions under said statute, a matter which is clearly within the public's interest.
