APPROVAL OF STATE ENGINEER

This is to certify that I have examined the foregoing application, and do hereby grant the same, subject to the following limitations and conditions:

This permit is issued subject to State Engineer's Ruling #6277 and all existing rights on the source. It is understood that the 0.78 c.f.s., herein granted is only a temporary allowance and that the final water right obtained under this permit will be dependent upon the amount of water actually placed to a beneficial use. State Engineer's Ruling #6277 sets forth that the applicant shall measure the total evapotranspiration in excess of precipitation using accepted methods and practices on the Ruby Lake National Wildlife Refuge for at least five consecutive years, and submit that information to the State Engineer to satisfy the requirement for proof of beneficial use. The State retains the right to regulate the use of the water herein granted at any and all times.

This permit does not extend the permittee the right of ingress and egress on public, private or corporate lands.

The issuance of this permit does not waive the requirements that the permit holder obtain other permits from State, Federal and local agencies.

State Engineer's Ruling #6277 requires a monitoring program for springs, groundwater levels and lake stages on the Ruby Lake National Wildlife Refuge to be submitted for approval to the State Engineer within one year from the date this permit is granted. This monitoring program will be deemed to represent the proof of completion.

The point of diversion and place of use are as described on the submitted application to support this permit.
