The proposed use should be temporary in nature, or the requested change should be the result of an unforeseen occurrence. (Failure to provide a detailed description may cause a delay in processing.)
This project requires dewatering the area prior to commencing mining operations. Therefore, perched water will be removed by drilling 50 foot to 100 foot sump(s) per bench and pumping a sufficient volume of water to enable mining operations to commence. The sump(s) will then be mined through completely. The above-described process will then be repeated as necessary to lower the ground water in stages, and therefore, continue mining. 181 afa.
