Attachment to temporary change application

EXHIBIT A

15. This application is one of several to provide construction water for compaction, dust control and hydrostatic testing. The total project consists of laying of 670 miles of 42-inch diameter natural gas pipe line from Opal, Wyoming to Malin, Oregon, passing through Elko Humboldt & Washoe counties, Nevada.

16. Miscellaneous remarks: Please send copies of notices and correspondence to the undersigned agent. The owner of the existing water right #55306, and of the property on which this proposed point of diversion is located, submits this temporary change application for the proposed temporary use by Ruby Pipeline, LLC, for installation of the natural gas transmission pipe line. Upon completion of the need for the construction water, Ruby Pipeline intends to release its further use of this temporary water right and to relinquish further well operation to owner Walker-Winecup-Gamble, Inc. In anticipation of this event, a permanent application or change application will be filed, for stock watering.

the earlier concrete materials DM. Aggregate sources that have not been used in the period between the aggregate investigations and the preparation for the contract award may be assumed to remain acceptable. Commercial aggregates sources that have been used should be examined to verify that adequate materials remain in the pit or quarry and that the lithology has not changed as materials have

been removed. If significant changes have occurred, they should be confirmed petrographically. Depending on the results of the petrographic examination, it may be necessary to reevaluate the aggregate source for suitability. The results of such a reevaluation should be presented as a supplement to the earlier concrete materials DM.
