The well under Permit 78709 has been drilled, cased and equipped. In addition to Permit 78709, Permits 78710 and 78711 are also associated with this well. These three permits have a total combined duty of 431.32 acre feet for the irrigation of 107.83 acres. The applicants indicate that they are currently irrigating approximately 94 acres of the total permitted. They also indicate that the well under these permits has declined in production and will no longer produce sufficient amounts of water to fully irrigate the total acreage allowed. They have determined that an additional well will need to be drilled to supplement the existing well in order to fully irrigate the permitted acreage and have determined it's proposed location. We are filing this temporary application to allow the applicants the ability to drill an exploratory well at the proposed location in order to determine if the new well will produce the quantities of water necessary to supplement the existing well. If this location proves successful we will file the permanent applications to change portions of Permits 78709, 78710 and 78711, as necessary, to the new well location.
