BASIS OF BEARING

The positions of water sources were determined from the U.S. Geologic Survey 7.5 minute topographic maps. Bearings and distances were calculated by scaling State Plane coordinate values (from the U.S.G.S. 7.5 quad sheets) of shown P.L.S.S. corners and shown or plotted water sources. The line drawn from the corner to the water sources describes the water source location. Spring sources were originally located on the ground by the Battle Mountain BLM District in the late 1970's and early 1980's and were plotted on 7.5 minute U.S.G.S. quads. A sample of these plotted positions were verified by Global Positioning Systems (GPS) analysis by a BLM cadastral surveyor in 1993. The remainder of the spring locations were verified with Ektachrome infrared (IR) aerial photography superimposed on topographic sheets and by coordinating the previously plotted positions with the aerial photo phreatophytic locations. Phreatophyte on Ektachrome IR aerial photography is usually conspicuously red against a green background.
