Append a sheet if necessary

(15) The maximum acreage irrigated in any year was <sup>23.43</sup> ~~23.43~~ 23.43 acres.

(16) The water claimed has ~~(has not)~~ been used for irrigation each and every year since the right was initiated.  
Strike out one not wanted

(17) The years during which no water was used for irrigation or during which the full water right was not used were 1915, 1918 and 1920 to 1926 inclusive. Water supply short due to dry years but entire flow of streams used.  
If water was not used, or used in reduced quantity at any time, full information as to causes and duration of non-use should be given, appending a sheet if necessary

(18) The claimant's water right was (was not) recorded in the office of the County Recorder of ..... County, said record being at page..... of Book..... of ..... and being a claim for ..... of water for the irrigation of .....

acres of land in the following legal subdivisions: .....

NOTE—Failure to record in the county in no way invalidates a water right, but if ditch or right was so recorded, supply full information under (19)

L.H. Taylor, State Water Right Surveyor

(19) The map provided by the State Engineer and attached hereto as a part of this proof is hereby accepted as correctly showing the ditch lines or irrigation works diverting or conveying the water claimed and the lands irrigated.

(20) Water from the source given and through the works described is also used for the following purposes other than irrigation: domestic use and watering stock throughout the year.

(21) The character of the soil is loam (Sandy, gravelly, loam) The soil needs 4 1/2 acre-feet per annum to properly irrigate the crops. A continuous flow of 1.00 cubic feet of water per average second, during the irrigation season of 7 1/2 months, is needed to irrigate each 100 acres of land.

(22) Remarks: The water supply from the source is extremely variable, ranging from 1 to 4 second feet in March and April but dropping to as low as 0.25 second foot by July 1 and even lower later in the season.  
It is therefore necessary to use all available water early in order to obtain the required total supply.  
The water from Rock Creek is commingled with the water from Pony and Cold Springs Creeks making it practically impossible to segregate the area irrigated from each source. It is estimated, however, that the water supply from each source is sufficient to take care of one third of the area under cultivation.
