NOTE—Failure to record in the county in no way invalidates a water right, but if ditch or right was so recorded, supply full information under (19)

L. H. Taylor, State Water Right Surveyor

(19) The map provided by the ~~State Engineer~~ and attached hereto as a part of this proof is hereby accepted as correctly showing the ditch lines or irrigation works diverting or conveying the water claimed and the lands irrigated.

(20) Water from the source given and through the works described is also used for the following purposes other than irrigation: ~~domestic use and watering stock throughout the year.~~

(21) The character of the soil is loam (Sandy, gravelly, loam) The soil needs 4½ acre-feet per annum to properly irrigate the crops. A continuous flow of 1.0 cubic feet of water per average second, during the irrigation season of 7½ months, is needed to irrigate each 100 acres of land.

(22) Remarks: The water supply from the source is extremely variable ranging from 1 to 4 second feet in March and April but dropping to as low as 0.25 second foot by July 1 and even lower later in the season. It is therefore necessary to use all available water early in order to obtain the required total supply.

The water from Rock Creek is commingled with the water from Pony and Gold Springs Creeks making it practically impossible to segregate the area irrigated from each source. It is estimated, however, that the water supply from each source is sufficient to take care of one third of the area under cultivation.
