(18) The claimant's water right was (was not) recorded in the office of the County Recorder of Washoe County, said record being at page of Book of and being a claim for of water for the irrigation of

acres of land in the following legal subdivisions:

Note--Failure to record in the county in no way invalidates a water right, but if ditch or right was so recorded, supply full information under (19)

(19) The map provided by the State Engineer and attached hereto as a part of this proof is hereby accepted as correctly showing the ditch lines or irrigation works diverting or conveying the water claimed and the lands irrigated.

(20) Water from the source given and through the works described is also used for the following purposes other than irrigation: Stockwatering, domestic and propagation of wildlife.

(21) The character of the soil is sandy loam The soil needs 4.0 acre-feet
(Sandy, gravelly, loam)
per annum to properly irrigate the crops. A continuous flow of 2.0 cubic feet of water per second, during the irrigation season of 12 months, is needed to irrigate each 100 acres of land.

(22) Remarks: Due to the nature of Bryan Creek having its watershed in the mountains to the west the runoff varies with climatic conditions, and therefore the natural flow of the stream is needed to irrigate these lands.

At various times waters from Bryan Creek are combined with waters from Upper Mahala Springs and Lower Mahala Springs to irrigate lands in Sections 23 and 26, T.16 N., R.19 E.

There are other springs or seeps of an intermittent nature located within the cultural area which subirrigates the lands described in this proof, these waters do not run off the described property.
