(19) Water from the source given and through the works described is also used for the following purposes other than irrigation: Stockwatering and Domestic

(20) The character of the soil is sandy loam The soil needs 5 acre-feet per annum to properly irrigate the crops. A continuous flow of 2½ cubic feet of water per second, during the irrigation season of 7 months, is needed to irrigate each 100 acres of land.

(21) Remarks: It is proposed to construct a concrete lined ditch with the point of diversion from the natural channel within a 40 acre subdivision of public survey at the following point: in the NW¼ SW¼ Sec. 35, T. 16 N., R. 70 E., M.D.B.&M., unsurveyed, at a point from which the SW corner of Sec. 25, T. 18 S., R. 20 W., S.L.B.&M., bears N.89°28'46"E., 7662.37 feet distant.

Since there is no certificate to this water on file in the State of Nevada, the B.L.M. will not grant permission to the ditch right-of-way until such rights are acquired. Although a water right from the State of Utah is in my possession, a change in the point of diversion which exists in the State of Nevada, makes it necessary for me to acquire title to water rights in the State of Nevada.

Six affidavits to establish vested right are attached and made part of this proof: William G. Meecham; J. H. Singleton and Arthur Olson; Louise Robison; E. W. Clay; F. G. Schumacher; and E. M. Smith.

The undersigned, being first duly sworn, deposes and says that the facts relative to the appropriation of water by J. D. Hill are full and correct to the best of his knowledge and belief.

If proof is not made by claimant, deponent should state on this line by virtue of what authority he represents the claimant
