(19) The character of the soil is sandy loam 4.0 acre-feet per acre per annum have been used to irrigate the crops. A continuous flow of 5.0 cubic feet of water per second has been used to irrigate 188.4 acres of land.

(20) Remarks: Meadow hay and diversified pasture land is irrigated as soon as the Spring run-off starts, usually in early February. Alfalfa and grain lands are irrigated from March 15 to October 15 each year. Reservoir on Praders Creek watershed is used for storage of run-off for entire year. Spring run-off and flooding occur as high as 20 cfs diminishing to 2 cfs between April 1 and June 1, thereafter a flow of 0.5 cfs occurs in the Warm Springs Valley Creek. Additional continuous flow from approximately 30 springs located on deeded land also contributes to the year round flow in Warm Springs Valley Creek.
