PROOF OF APPROPRIATION OF WATER FOR IRRIGATION
SOURCE: SILVER SPRINGS
CLAIMANT: SILVER CREEK RANCH, INC.**

Item 19:

The lands being irrigated are composed of a layer of topsoil of a clay or sandy loam lying over sands or gravels.

The continuous water flow requirements have not been determined as the normal stream flow is characterized by high water flows in the Spring season followed by severely reduced flows for the balance of the growing season. there has been no monitoring program which would give an indication as to the acre-feet of water required per acre of land to produce the existing culture. the best indication available is that shown in the recorded ditch claim which computes to be a continuous flow of 0.025 cfs per acre of land.
