ATTACHMENT FOR PROTESTS OF APPLICATIONS 73673 (Butte Valley)

This application is being protested by the Bureau of Land Management because it would exceed the estimated perennial yield for Butte Valley (Basin 178). According to the State of Nevada's Water Resources and Inter-Basin Flows Map, the estimated perennial yield for Butte Valley (Basin 179) is 14,000 acre feet. This application, along with the other six applications filed by Nevada Power Company in Butte Valley (Basin 178), would use 15,200 acre feet exceeding the estimated perennial yield by 1,200 acre feet. This does not take into account any existing water rights in Butte Valley (Basin 178).

Granting water rights for these applications are not in the public interest because the loss of groundwater would affect habitat for wildlife and wild horses. Hunter Spring and April Fool Spring are located near the applications and could be affected by the drawdown from these applications. There are also four active sage grouse strutting grounds within five miles of these applications that could be impacted if these springs are lost.
