640 AFA is a large amount of water to be pumping out of the small valley in basin 99. The owners of one property on Red Rock Road have already had to drill their well deeper. The artesian well on a property on Dry Valley Road quits running when the property across the road fills their pond and the water table dropped when the previous owners of Red Rock Ranch LLC irrigated in the summer of 2005.

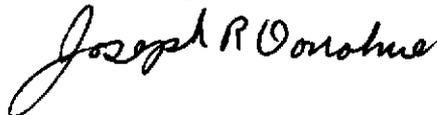

There is a domestic well on my property that use to over flow in the winter and spring from the high water table. It has not done so in the past two years. My concern is that I would have to drill the well deeper. Not only will that be very expensive, but there is no guarantee that we would have sufficient water for our needs.

No one has been able to tell us how deep the underground water is in basin 99. With the water being pumped from Red Rock Valley Ranch LLC to Lemon Valley, our water basin would not be able to recharge. To my knowledge, developers buy up the water rights from individuals willing to sell and pump the water somewhere else. These developers don't even live here in the valley.

If the water was being used in this basin I would not be as concerned because the groundwater would be recharged.

I am strongly against pumping the water from basin 99 to other basins.

Sincerely,

Joseph R. Donohue
