ALL COPIES MUST CONTAIN ORIGINAL SIGNATURE.**

Exhibit "A"

Application 73963

This application proposes to change the point of diversion, place and manner of use of 640 acre-feet of ground water from the Red Rock Valley Hydrographic Basin for municipal use within East and West Lemmon Valleys of Washoe County. This application is a change of Proof of Vested right V03111. This proof, if adjudicated and found to be a valid claim, would be senior to most water rights appropriations in the basin. However, this proof is not adjudicated and its validity is in question. Even if the proof is found to be a valid claim, the quantity of water actually put to beneficial use may be adjusted.

The pertinent data regarding this basin consists of the following:

- 1) Estimated yield according to U.S.G.S. Reconnaissance report # 43 is 1000.00 acre-feet annually.
- 2) Preliminary data from the Nevada Division of water Resources indicates existing permits and certificates with an approximate total duty of 965.18 acre-feet for Irrigation use.
- 3) Preliminary data from Washoe County Department of Water Resources (WCDWR) indicates an approximate total number of 650 residential parcels. 320 of these parcels are developed and utilize an individual domestic well as their source of water supply, and the remaining 330 parcels have the right, per Nevada revised Statutes, to drill a domestic well in support of a single family dwelling.
- 4) WCDWR has started a study of the water resources of Red Rock Valley in 2003. This study consists of water level measurements and installation of precipitation gauges.

NRS 533.370 states that:

The State Engineer is prohibited by law from granting an application to appropriate the public waters of State of Nevada where:

- A. *There is no unappropriated water at the proposed source;*
 - B. *The proposed use or change conflicts with existing rights;*
 - C. *The proposed use or change conflicts with protectible interests in the existing domestic wells as set forth in NRS 533.024; or*
 - D. *The proposed use or change threatens to prove detrimental to the public interest;*
6. *In determining whether an application for an interbasin transfer of groundwater must be rejected pursuant to this section, the State Engineer shall consider:*

- (a) Whether the applicant has justified the need to import the water from another basin;*
- (b) If the State Engineer determines that a plan for conservation of water is advisable for the basin into which the water is to be imported, whether the applicant has demonstrated that such a plan has been adopted and is being effectively carried out;*
- (c) Whether the proposed action is environmentally sound as it relates to the basin from which the water is exported;*
- (d) Whether the proposed action is an appropriate long-term use which will not unduly limit the future growth and development in the basin from which the water is exported; and*
- (e) Any other factor the State Engineer determines to be relevant.*

By only attributing 1 acre-foot of consumption to each of the existing and future domestic wells, the existing appropriation from this basin, without the duty requested under V03111, would be about 1615.00 acre-feet. By attributing the legally allowed limit of 2.02 acre-feet to each of the domestic wells, then this number would increase to about 2265.00 acre-feet, approximately 2 times that of the estimated yield of this basin. It should be noted that majority of the 650 parcels in Red Rock Valley are about 10 acres in size, and attributing 2 acre-feet of water consumption annually would not be unrealistic.

Therefore, based on the forgoing, granting of this change application would be contrary to all criteria outlined in N.R.S. 533.370, until such time as the proof is adjudicated and its validity and duty validated by the State Engineer and a court of law.
