Exhibit "A"
Applications 75958 & 75959

These applications propose to export water from a basin in Washoe County for use in Fernley, Silver Springs, Stagecoach and Dayton and other areas within Lyon and Storey Counties.

The magnitude of the project is about 1,415.60 acre-feet total from Granite Creek located in the Hualapai Flat hydrographic basin. This basin is located in Eastern Washoe County with a small portion lying within Pershing County.

These applications are changes of existing certificated and vested rights for irrigation use. Based on the above information Washoe County concludes that:

The proposed changes in the above applications contradict the provisions of NRS 533.370-6 for the following reasons:

The applicant has not justified the need to import the water from another basin. Conversion of agricultural water rights has been the standard model of water resource development to support growth, and there are abundant agricultural water rights available to the county of destination, which have not been utilized to meet their municipal demands.

Some duty of water has to be reserved for the basin of origin to meet the future growth and development in that basin. This method of mitigation of adverse economic effects is contemplated in NRS 533.4385.

The quantities of water sought to export out of this basin must be limited to consumptive use component of the right.

Other relevant factors to be considered by the State Engineer are the anticipated future growth and demand for water resources within Washoe County. A comparison of the projected land uses and population forecasts for Washoe County to the available water resources within the boundaries of Washoe County, including the basins associated with these applications, indicates a deficit in available water resources in meeting those future water demands. Therefore, the resources of these basins would be required within Washoe County and export of these resources would be detrimental to the interests of a larger sector of the population of the State of Nevada.

Utilization of the resources from these basins by Washoe County would include provisions to mitigate any adverse economic effects and limit the extent of the export to eliminate any adverse environmental impacts. Washoe County would take these measures to balance the benefits and the negative impacts of such an export project within its own boundaries.
