**ADDITIONAL INFORMATION TO SUPPORT THE PROTEST
OF THE U.S. FISH AND WILDLIFE SERVICE
IN THE MATTER OF APPLICATION 79692**

Application No. 79692 was filed by the Nevada Power Company, dba NV Energy on March 15, 2010 requesting a diversion rate of 5.57 cubic feet per second (4,032 ac-ft annually) from an underground source in Hidden Valley, groundwater basin 217. The purpose of the proposed application is industrial use. Basin 217 is part of the Colorado River Regional Groundwater Flow System. The proposed groundwater well has the potential to affect water rights at Moapa National Wildlife Refuge (NWR) and listed species in the Coyote Springs Valley and Muddy River Springs.

The U.S. Fish and Wildlife Service (Service) requests that the application be denied because:

1. Water is not available to appropriate in the manner described.
2. Granting of this application will cause injury to Service-owned senior water rights for water on the Fish Springs NWR.
3. The proposed activity is not likely compatible with the purposes of the national wildlife refuges. Granting this application will threaten or damage habitat for species that are endangered, threatened, or considered for future listing under the Endangered Species Act and, therefore, is not in the public interest.

According to the Basin Summary for Basin 217 from the State Engineer's Office, the perennial yield is 200 ac-ft annually. The sum of the applied-for volume and the existing water rights exceeds the perennial yield for this basin.

The Service is also concerned about impacts to senior water rights at Moapa NWR. Moapa NWR spring flow is supported by groundwater discharge from the regional carbonate aquifer and all of the current spring discharges and associated surface water are protected through senior state appropriative water rights. Application 79692 has the potential to unreasonably impact these senior water rights.

The proposed groundwater development is not in the public interest. The impacts from the proposed diversions will eventually and inevitably impact biological resources and endangered species at Moapa NWR, in the Coyote Springs Valley, and at Muddy River Springs.
