**EXHIBIT "A" to Protest of Mark Moyle Farms LLC.
To
Application No. 82571**

- 1. Application No. 82571 seeks to appropriate large quantities of groundwater from the Diamond Valley Hydrographic Basin (Basin No. 153). The Protestants, Mark Moyle Farms LLC Members and affiliated entities, own numerous groundwater rights within Basin 153. The proposed use of water under Application No. 82571 would conflict with Protestants use of water under its numerous existing groundwater rights in Basin No. 153.**
- 2. Nevada State Law does not allow for a surface water right to be converted to a groundwater right.**
- 3. There is no un-appropriated water in Basin No. 153.**
- 4. The granting of Application No. 82571 would be detrimental to the public interest.**
- 5. Application No. 82571 seeks to appropriate large quantities of groundwater for irrigation purposes. Granting the applications would violate previous orders entered by the State Engineer including, but not necessarily limited to Order No. 717. That order provides, among other things, that all "applications filed after December 31, 1978 to appropriate groundwater for irrigation purposes on any land within the Diamond Valley Ground Water Basin will be denied."**
- 6. The historic acreage of land irrigated may be insufficient to support the quantity of water sought to be appropriated under Application No. 82571.**
- 7. The historic flow of water from Cox Canyon, and Telegraph Canyon has always only been seasonal, intermittent, snow- melt runoff that only happens in the spring. The flow rate varies depending on snow pack and melting rate. There does not exist any other spring complex in the area that comes from an underground source outside of the Taft, or Thompson spring.**
- 8. The Protestant requests that the State Engineer conduct and adjudication of the surface water rights in Basin No. 153.**
- 9. The Protestant requests that the State Engineer postpone action on Application No. 82571 until an adjudication of vested and all other surface water rights in Basin No. 153 has been completed.**
- 10. The Protestant requests that water rights, if any, granted under Application No. 82571 are conditioned on the implementation of a monitoring program approved by the State Engineer. If impacts to existing rights or public interest are demonstrated**

by the monitoring program, the Applicant should be required to mitigate those impacts to the satisfaction of the State Engineer and the affected party.

11. Application No. 82571 requests a Duty of 4.0 acre-feet when the State Engineer has determined that a Duty of 1.7 acre-feet is sufficient for irrigating meadow hay.

12. Application No. 82571 requests water to irrigate 344.89 acres of land. There is no evidence or Proof of Beneficial Use (PBU) to support that 344.89 acres of land was irrigated.

13 Application No. 82571 requests water from January 1st- December 31st annually. If this water is to be used for irrigation purposes, it should be appropriated from April 1st- October 31st annually. This time period represents the irrigation season.

14. The Application No. 82571 is attempting to circumvent the designation orders by first filing new un-adjudicated vested claims for surface water use and then filing for supplemental ground water uses citing to the exception in the designation Order No. 1226 of "Those applications filed to mitigate senior surface water rights that have been impacted by groundwater pumping under junior water rights".

15. The Application should be denied as the rights are newly filed vested CLAIMS and their historical and continued use has not been established or adjudicated.

16. The Protestant reserves the right to supplement this protest as additional information becomes available concerning Application No. 82571.
