PURPOSE AND SCOPE

The intent of this document is to quantify groundwater use in Warm Springs Valley and inventory groundwater resources allocated by the Nevada Division of Water Resources (Office of the State Engineer) for those years beginning October 1, 1992 and ending September 30, 1994 (hereafter referred to as the 1993 and 1994 water years). The water years of 1993 and 1994 have been combined in this report for administrative purposes.

Warm Springs Valley (AKA: Palomino Valley) lies north and east of the Reno-Sparks area approximately 12 miles along S.R. 445 (Pyramid Lake Highway) and encompassing an area of about 250 square miles. Very little dependable surface water exists at the valley floor so underground sources provide the majority of the water placed to beneficial use. Warm Springs Creek from the north and Cottonwood Creek from the south drain into the valley from the surrounding mountains and are fully appropriated before they reach the valley floor. Mullen Creek intercepts drainage that overflows from Warm Springs Valley and conveys it to Pyramid Lake Valley on the northeast. Warm Springs and Cottonwood Creeks are perennial near the mountains but only reach the valley floor during periods of heavy runoff and, on rare occasion, overflow into Mullen Creek which is ephemeral.

SUB AREAS

The sub areas herein do not represent drainage sub basins as defined by the State Engineer's office. The boundaries of the sub areas were determined by intensity of water use and physical features. The sub areas are: West (W), Central (C), and South (S) (see map).

PROCEDURES AND SUMMARY

The pumpage inventory for water years 1993 and 1994 were conducted primarily during September and October of their respective years. All permitted and certificated water rights were

also field checked at least once during the growing season to verify the culture and estimate of water use.

Total pumpage from all sources including domestic wells was estimated as **4354** acre-feet for 1993 and **5365** acre-feet in 1994. This increase in pumpage can be best attributed to the extremely dry winters/springs and the large number of recently approved change applications which allowed new owners to place their water to beneficial use (see figure A).

Irrigation continues to represent the primary consumption of water with alfalfa and potatoes as the major crops in 1993 and alfalfa, onion and garlic in 1994 (see figure B). Irrigation accounted for **3997** acre-feet in 1993 and **4963** acre-feet in 1994. The greatest concentration of irrigated land lies east of the Pyramid Lake Highway in the central sub area on and near land formerly controlled by MCO Properties, Inc. The next largest area of irrigation is in the west sub area scattered along the Winnemucca Ranch Road north of Whiskey Springs Road and on the Winnemucca Ranch. Additional irrigated land lies scattered about the valley in 1.0 to 20.0 acre fields usually accompanied by single family dwellings.

Domestic pumpage was estimated from a count of domestic wells drilled in the valley as **317** acre-feet in 1993 and **330** acre-feet in 1994. The count was cross referenced to Washoe County Assessor's records for parcels with dwellings to increase accuracy. Since the landscaping is typically minimal unless a water right (permit) is attendant, the annual duty was estimated as 1000 gallons per day for an average annual duty of 1.12 acre-feet annually per well in use.

Stockwatering was estimated based upon the number of animals watered at **16** acre-feet in 1993 and **21** acre-feet in 1994.

Recreation accounted for less than **1½** acre-feet in 1993 and 1994 at the Washoe County Regional Shooting Facility and at the Air Sailing, Inc. glider strip.

Quasi-Municipal use accounted for **23** acre-feet in 1993 and **50** acre-feet in 1994 at the Reno-Sparks Indian Colony, the T.M.F.P.D. volunteer fire station and by the Palomino Valley G.I.D.

Industrial and Other uses accounted for **0** acre-feet in 1993 and 1994.

SUPPLEMENTAL RIGHTS

18.15 acres of the irrigated land on the Winnemucca Ranch are supplemental to Warm Springs Creek water in the amount of 64.60 acre-feet. Additionally 18 acres under the ownership of MCO Properties, Inc. are supplemental to waters of Piute Creek in the central sub-area in the amount of 72.00 acre-feet.

ERRATA

Certain lands in the central area under the control of Tehama Holdings, Inc. have been stripped of their water rights by deed. In subsequent years Tehama Holdings, Inc. have consolidated their remaining water rights on the same lands. Although the land to which water is appurtenant under several permits owned by second parties is irrigated, their water rights have not been exercised since January 15, 1992. The specific certificated permits referred to are as follows: 28071, 28444, 28447, 30109, 30110, 30111, 30112, 30115, 30116, 30118 and 30119.

RECHARGE

The State Engineer maintains neither snow courses nor precipitation gauges in the mountains surrounding Warm Springs Valley. Stream flow measurements are also not regularly performed. Subsequently, recharge to Warm Springs Valley has been estimated by empirical methods as described in "Water Resources - Reconnaissance Series: Report 43" by F. Eugene Rush and Patrick A. Glancy in 1967 (hereafter referred to as Recon. Report 43). That estimate, by the Eakin method, was placed at 6,000 acre-feet annually.

Runoff was estimated by D. O. Moore in Recon. Report 43 as 14,000 acre-feet annually, primarily from Warm Springs Creek and Cottonwood Creek. Whereas Mullen Creek drains the valley only in the amount of about 70 acre-feet annually. No playa exists in Warm

Springs Valley which leads one to believe that actual recharge may be somewhat higher than the Eakin method would otherwise suggest.

Recharge from irrigation is not readily estimated and is dependant upon several variables: rate of water application, total depth of wetting, direct evapotranspiration rates, crop type, infiltration and percolation rates which are in turn dependant upon soil type and structure. Based upon Recon. Report 43 the rate of recharge from irrigation is likely minimal.

Perennial yield has ben estimated in Recon. Report 43 as 3000 acre-feet annually by taking into account natural discharge such as evapotranspiration and subsurface discharge to neighboring valleys.

LEGEND

A number of abbreviations are used in the tables of this report. The following two pages are a brief discussion of the columns of the report tables and definitions of abbreviations utilized.

APPEARING IN THE WATER RIGHTS SUMMARY

COLUMN HEADING	DESCRIPTION
APP. NO.	Application number in the records of the State Engineer. If an application is issued this number becomes the permit number. AKA: File number.
STATUS	Status of the corresponding application at the end of the water year. See: Abbreviations.
DUTY	Amount of water allowed or requested in the application. All figures are in acre-feet annually (AFA).
USE	Manner in which water is put to beneficial use. See: Definitions.
19**	Amount of water diverted (pumped) in the indicated year for the corresponding application number. Figures are in acre-feet annually (AFA).

APPEARING IN THE PUMPAGE INVENTORY

PERMIT	See: "APP. NO." above.
STAT	See: "STATUS" above.
MOU	See: "USE" above.
PERMITTEE	Owner of record in the office of the State Engineer. Not necessarily the actual owner of the land to which the water is appurtenant.
PLACE OF USE	Forty (40) acre subdivisions in which the water is permitted to be placed to beneficial use.
Q1 Q2 SEC T R	Abbreviation of, "One quarter of one quarter of a Section in a Township and a Range." AKA: Legal.
UNITS/ACRES	Number of units (head of stock or number of parcels) or acreage to be irrigated under the terms of the corresponding permit.
DUTY	Amount of water allowed to be pumped over the course of a year. All figures in acre-feet annually (AFA).
SUPP. ADJ.	Supplemental Adjustment. The sum of this column is subtracted from the sum of the "DUTY" column to yield the actual committed resources. The permit corresponding to a figure in this column is considered to be supplemental to another permit in the amount indicated. Also used to account for the issuance of TEMPORARY permits changing (abrogating) existing permits during the water year.
UNITS USED	Actual number of units or acres of land irrigated during the reported water year.
DUTY USED	Actual (metered or estimated) amount of water placed to beneficial use during the reported water year.
MCO PAR.#	Parcel number corresponding to the "Exhibit Map Supporting the Conveyance of Water Rights by MCO Properties, Inc." on file in the State Engineer's office. This column only pertains to the Central area.
REMARKS / CULTURE	Self explanatory.

OTHER ABBREVIATIONS UTILIZED

CER	Certificate
#####	Number appearing in a status column indicates a certificate with number #####
PER	Permit
RFA	Ready for Action
APP	Application
ABR	Abrogated
T-ABR	Abrogated by a temporary permit
WDR	Withdrawn
EXP	Expired temporary permit/ date on which a temporary expires
REL	Relinquished
T-PER	Temporary Permit
IRR	Irrigation
I&D	Irrigation and Domestic
STK	Stockwatering
S&D	Stockwatering and Domestic
Q-M	Quasi-Municipal
IND	Industrial
ENV	Environmental remediation use
E-PER	Permit for environmental remediation
C-#####	Certificate number #####
POD	Point of diversion
BLM	U.S.D.I. Bureau of Land Management
GID	General Improvement District
AF/ac.	Acre-feet per acre
**	Quantity unable to be fit into format - usually extensive
