ABSTRACT

This inventory presents the status and pumpage of all permitted, certificated and claim of vested right groundwater rights located within Churchill Valley, Hydrographic Basin 8-102, for water year 2013 (October 1, 2012 through September 30, 2013). Also included are links to graphs and data associated with streamflow discharge, reservoir storage and depth to groundwater.

The data presented are valid for the time period of this report and may vary from previously published figures as water rights within the basin are subject to administrative action, such as certification, cancellation, forfeiture, or withdrawal on a continuing basis.

For water year 2013, the permitted, certificated and claims of vested right groundwater rights totaled **10,845 acre-feet**. The manner of use having the greatest amount of groundwater appropriations was Quasi-Municipal, whose appropriations totaled 6,461 acre-feet. Irrigation had the next greatest amount of appropriations, totaling 3,938 acre-feet.

An estimated **2,550 acre-feet** were pumped during the 2013 water year, this includes an estimated 1,405 acre-feet by exempt domestic wells. Exempt domestic wells are defined by Nevada Revised Statutes (NRS) 534.013 and do not require a permit issued by the State Engineer. The amount of groundwater pumped for Quasi-Municipal purposes was 530 acre-feet. The amount pumped for irrigation was 581 acre-feet.

HYDROGRAPHIC BASIN SUMMARY

HYDROGRAPHIC BASIN NUMBER	102, REGION 8
HYDROGRAPHIC BASIN NAME	CHURCHILL VALLEY
COUNTIES	LYON, DOUGLAS, STOREY, CHURCHILL
MAJOR COMMUNITIES	SILVER SPRINGS
DESIGNATED	YES
DENIALS BASED UPON WATER AVAILABILITY	IRRIGATION, COMMERCIAL, QUASI- MUNICIPAL
GROUNDWATER LEVEL MEASUREMENTS	USGS, NDWR
PUMPAGE INVENTORY, ACRE-FEET IN 2013	2,550*
STATE ENGINEER'S ORDERS	
689 - DESIGNATION	DATE: AUGUST 23, 1977
1181 - DOMESTIC WELL CREDIT	DATE: SEPTEMBER 27, 2006
1207 - PREFERRED USE	DATE: APRIL 22, 2010

COMMITTED GROUNDWATER RESOURCE: 10,845 ACRE-FEET AS OF SEPTEMBER 2013

IRRIGATION3,938	QUASI-MUNICIPAL.....6,461	STOCK.....57
COMMERCIAL40	RECREATIONAL.....39	MM/IND.....310

NOTE: Committed groundwater resource data are accurate for September 2013. Manner of Use category totals vary over time, as water rights (rights) are not necessarily static. Individual rights may be subject to change applications, certification, withdrawals, and cancellations; each of these circumstances could impact the duty, diversion rate and acreage associated with a given right. The value associated with each manner of use category does not include those portions that have been relinquished in support of domestic wells. A total of 2.02 acre-feet have been relinquished in the basin.

*Includes pumpage by exempt domestic wells, as defined by NRS 534.013. The domestic use estimate is based upon a count of the total domestic wells in the basin multiplied by 1 acre-foot per annum. The number of domestic wells in the basin was estimated by queries of the Nevada Division of Water Resources' Well Log Database and the Lyon County Assessor's parcel data and is estimated to be 1,405.

PURPOSE AND SCOPE

The purpose of this report is to inventory all of the groundwater resources allocated and described by the Office of the State Engineer, Nevada Division of Water Resources, and to estimate the amount of groundwater pumped within the Churchill Valley Hydrographic Basin 8-102, for the water year beginning October 1, 2012 and ending September 30, 2013 (water year 2013). This report estimates the amount of groundwater pumped under the permits and certificates issued by the State Engineer, vested claims of right, and the amount pumped by exempt domestic wells within the basin. Links to associated information such as groundwater level measurements and streamflow statistics are also presented.

DESCRIPTION OF THE STUDY AREA

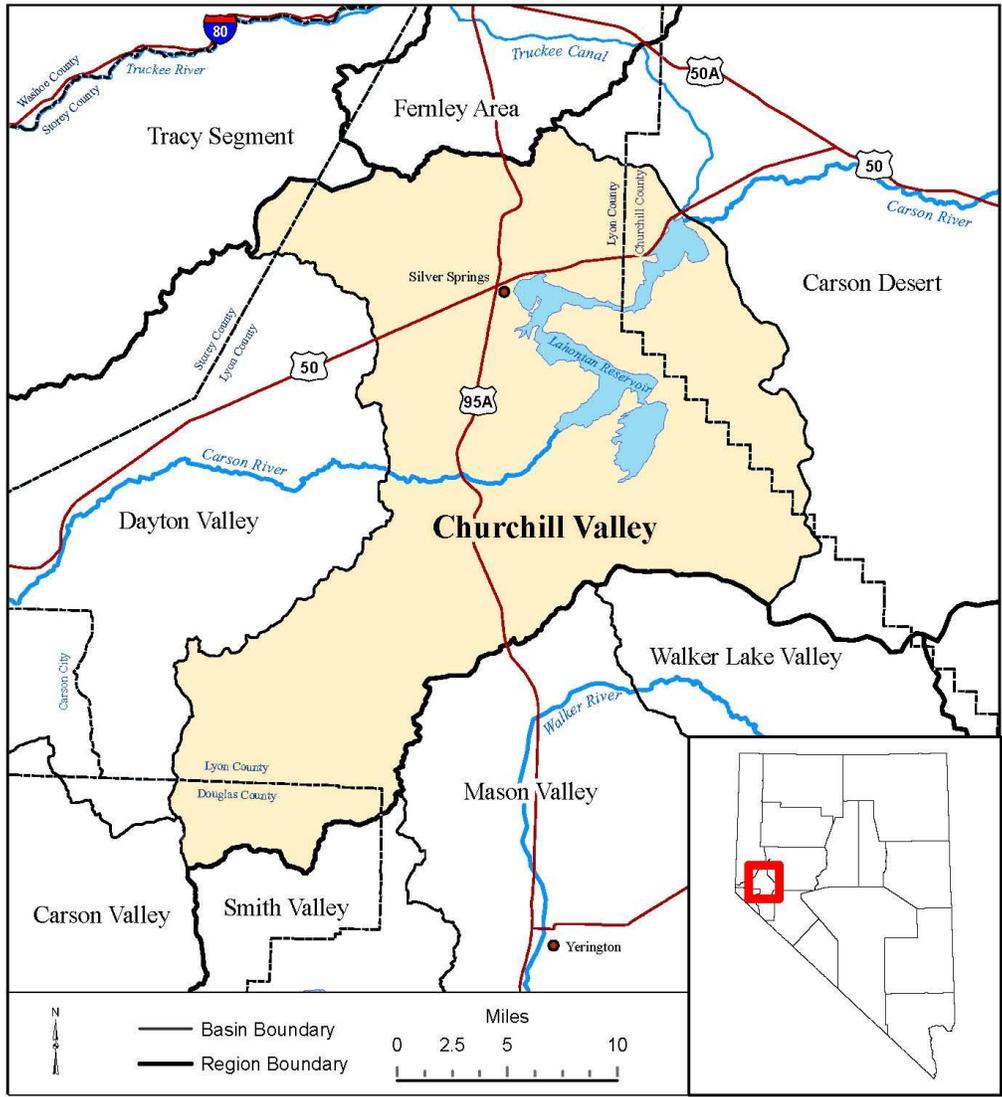

Churchill Valley is located in west central Nevada and lies wholly within the state. The basin occupies approximately 490 square miles and covers parts of four counties: Churchill, Douglas, Lyon, and Storey. The majority of the basin is within Lyon County. Churchill Valley is bounded on the north by the Virginia Range that rises to elevations greater than 7,000 feet, on the east by the Dead Camel Mountains, rising to an elevation of approximately 5,260 feet, on the southeast by the Desert Mountains that rise to elevations greater than 6,000 feet, on the south by the Buckskin Range, rising to an approximate elevation of 7,000 feet, on the southwest by the Pine Nut Mountains, rising to an elevation greater than 8,700 feet, and on the west by Churchill Butte and the associated alluvial rise at an elevation of approximately 6,000 feet (all elevations in this text are above mean sea level). The adjacent hydrographic basins are as follows: Fernley Area (6-076) to the north, Carson Desert (8-101) to the east, Walker Lake Valley (8-110) and Mason Valley (8-108) to the southeast, Smith Valley (8-107) and Carson Valley (8-105) to the southwest, Dayton Valley (8-103) to the west; and Tracy Segment (6-083) to the northwest (See Figure 1). The boundary of the Churchill Valley Hydrographic Basin is as described by Designation Order 689 issued by the Nevada State Engineer dated August 23, 1977 (See Figure 1).

HYDROLOGY

The dominant hydrologic features of Churchill Valley are the Carson River and Lahontan Reservoir. The Carson River flows from its headwaters in the Sierra Nevada through the Carson, Dayton, and Churchill Valleys to the Carson Sink, located in the Carson Desert, Hydrographic Basin 8-101. The river enters Churchill Valley at an elevation of approximately 4,200 feet and flows from west to east and into Lahontan Reservoir. Tributaries to the Carson River in this valley are ephemeral and only reach the river in times of high flow during run-off. The river channel often goes dry in the later summer months within the Churchill Valley reach.

The U.S. Geological Survey (USGS) operates a streamflow gaging station near the location where the Carson River enters Churchill Valley (USGS #[10312000](#) Carson River near Fort Churchill, Nevada).

Figure 1. Location Map of Churchill Valley Hydrographic Basin 8-102

The gage is located in the NE ¼ SE ¼ Section 35, Township 17 North, Range 24 East. The period of record is April 1911 through the current water year. The average annual run-off for the station is 267,900 acre-feet; the annual run-off for water year 2013 was 89,070 acre-feet (written communication from Steve Berris, USGS. February 2014).

The Buckland Ditch diversion is located approximately 400 feet upstream of the gaging station. The ditch delivers Carson River water to pasture and alfalfa fields located in Churchill Valley. For water year 2013, approximately 4,760 acre-feet were diverted into this ditch for irrigation and stockwater uses (written communication from Dave Wathen, Federal Water Master’s Office. February 2014). The diversions to the Buckland Ditch should be added to the USGS gage reading in order to estimate the Carson River discharge from Dayton Valley to Churchill Valley.

Lahonton Reservoir was created with the completion of Lahontan Dam by the Bureau of Reclamation in 1915. The reservoir has a capacity of 295,500 acre-feet at the spillway crest at

4,162 feet. The reservoir stores water from the Carson River and from the Truckee River via the Truckee Canal. Lahontan Reservoir supplies irrigation water for the Newlands Project in the Carson Desert.

The USGS monitors the content of the reservoir on the upstream side of the Lahontan Dam (USGS #[10312100](#) Lahontan Reservoir near Fallon, NV). The gage is located in the SW 1/4 SE 1/4 Section 33, Township 19 North, Range 26 East. The period of record is January 1917 through the current year. The maximum reservoir volume for 2013 was 126,000 acre-feet; the minimum was 3,830 acre-feet (Data retrieval of approved and provisional data for site #10312100 from USGS NWIS Web: February 7, 2014).

Groundwater Levels

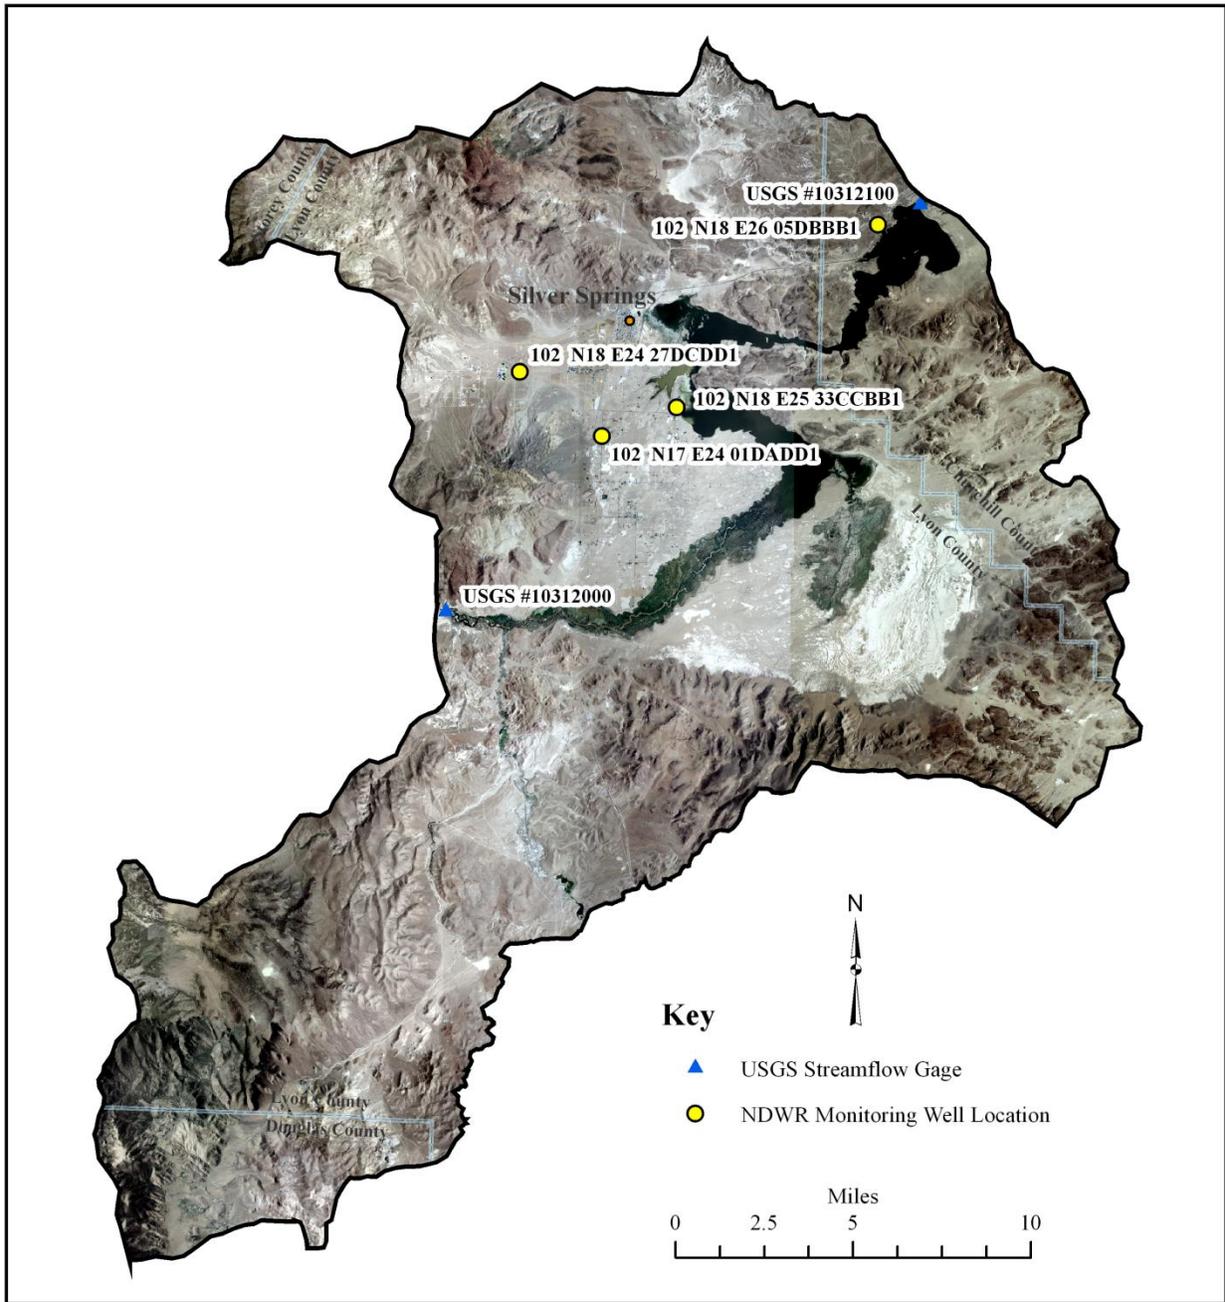

Groundwater level measurements conducted by the Nevada Division of Water Resources are done on a quarterly basis at the following four locations (see Figure 2):

- [102 N17 E24 01DADD1](#)
- [102 N18 E24 27DCDD1](#)
- [102 N18 E25 33CCBB1](#)
- [102 N18 E26 05DBBB1](#)

The water level data and hydrograph for each site, as well as all other groundwater level data collected by or reported to the Nevada Division of Water Resources are available from the Water Level Data page of the Nevada Division of Water Resources website (<http://water.nv.gov/data/waterlevel/>). Data retrievals are organized by hydrographic basin.

In addition to the sites monitored by the Nevada Division of Water Resources, the USGS monitors a network of different wells whose data is available directly from the USGS, or from their website, <http://nevada.usgs.gov>.

Figure 2. Location Map of Churchill Valley Groundwater Level Monitoring Network

METHODS TO ESTIMATE PUMPAGE

This report estimates the amount of groundwater pumped under vested claims of right and the permits and certificates issued by the State Engineer, as well as the amount pumped by exempt domestic wells in the valley. The following methods were used to arrive at the estimated use:

- Where totalizing meters were in place, meter readings were taken and compared with previous data (if available).
- Where meters were not in place and the manner of use was irrigation, the place of use was inspected to estimate the amount of acreage under cultivation. Pumpage was then estimated by multiplying the number of acres under cultivation by 3 or 4 acre-feet per acre, depending on the duty specified by the certificate.
- Where meters were not in place and the manner of use was irrigation and the number of hours the well was operated was known, the hours were multiplied by a measured, or reported, diversion rate to determine the amount of water pumped.
- Where meters were not present, previous data were not available, and the manner of use was not irrigation, pumpage was estimated using the annual duty associated with the certificate if the use of the water was as described in the certificate; if the use of the water was not as described in the certificate, pumpage was estimated based on how the water was being used.
- The primary water purveyor for Churchill Valley is the Silver Springs Mutual Water Company (SSMWC). The SSMWC currently operates four production wells and serves **1,086** connections (oral communication, SSMWC. February 2014). SSMWC reports monthly pumping totals on a quarterly basis as a condition of the permits under which the groundwater was appropriated. These reports are used directly as the amount pumped by SSMWC.
- Stock water wells are not required to be equipped with totalizing meters. Estimates of pumpage were derived from a combination of sources, including information from the Bureau of Land Management (BLM, [Rangeland Administration System](#)), documentation from the water right permit files and the certificated duty for the permit.
- Exempt domestic wells may be drilled and utilized where water service from a purveyor is not available. These types of wells do not require a permit from the State Engineer if they do not pump more than 2 acre-feet per year as provided by Nevada Revised Statutes (NRS) 534.180. NRS 534.013 defines this category of domestic use as follows: *“Domestic use or domestic purposes extends to culinary and household purposes directly related to a single family dwelling, including, without limitation, the watering of a family garden and lawn and the watering of livestock and any other domestic animals or household pets.”* The number of exempt domestic wells in the basin was estimated by queries of the Nevada Division of Water Resources’ Well Log Database and the Lyon County Assessor's parcel data and estimated to be 1,405. The amount of water pumped by exempt domestic wells is estimated to be one acre-foot per well per year.

PUMPAGE BY MANNER OF USE

Note that all data herein are estimates and subject to revision. The total estimated groundwater pumpage for the water year 2013, including exempt domestic wells, is **2,550 acre-feet**. The annual duties of permitted, certificated and vested claims within the Churchill Valley hydrographic basin total approximately **10,845 acre-feet**. The permitted and pumped totals as categorized by manner of use are as follows:

A. Quasi-Municipal (QM)

During water year 2013, appropriations for quasi-municipal purposes totaled 6,461 acre-feet. An estimated 530 acre-feet were pumped during water year 2013.

B. Irrigation (IRR)

During water year 2013, appropriations for irrigation purposes totaled 3,938 acre-feet. An estimated 581 acre-feet were pumped during water year 2013. The groundwater irrigation appropriations are associated with approximately 1,081 acres. Of these, approximately 703 acres were irrigated during water year 2013. A significant number of those acres have surface water rights appurtenant as well. This report acknowledges those acres with surface water rights but is not intended to quantify, nor present any definitive place of use of the surface water rights.

C. Commercial / Recreation (COM / REC)

During water year 2013, appropriations totaled 79 acre-feet for commercial and recreational purposes in the basin; 40 acre-feet for commercial and 39 acre-feet for recreation. Five acre-feet were pumped for commercial purposes and 15 acre-feet were pumped for recreation purposes during water year 2013.

D. Stock (STK)

During water year 2013, appropriations totaled 57 acre-feet for stock purposes in the basin. An estimated 13 acre-feet were pumped during water year 2013.

E. Mining and Milling / Industrial (MM / IND)

During water year 2013, appropriations totaled 310 acre-feet for mining and milling, and industrial purposes in the basin; 307 acre-feet of which are for mining and milling. Pumpage is estimated at 1 acre-foot for water year 2013.

F. Domestic (DOM)

During water year 2013, appropriations for domestic purposes totaled 0 acre-feet in the basin; however, records available to the State Engineer indicate an estimated 1,405 domestic wells existed in the basin during water year 2013. The amount of water pumped for domestic use as described under NRS 534.013 is estimated at 1,405 acre-feet.

APPENDIX A

**CHURCHILL VALLEY GROUNDWATER PUMPAGE FOR WATER YEAR 2013 BY
MANNER OF USE**

PERCENTAGE OF GROUNDWATER PUMPAGE FOR WATER YEAR 2013 BY MANNER OF USE

GROUNDWATER PUMPAGE FOR WATER YEAR 2013 APPROPRIATIONS vs. ACTUAL PUMPAGE

APPENDIX B

**CHURCHILL VALLEY WATER YEAR 2013 GROUNDWATER PUMPAGE BY
APPLICATION NUMBER**

Explanation of Column Headings for Groundwater Pumpage by Application Number

APP NO.	The file number of the Application to Appropriate/Change Water.
UNIQUE IDENTIFIER	An ID assigned to each well, based on its geographic location. POC – Proof of Completion. “No POC Filed” indicates that no POC has been submitted to the Office of the State Engineer.
STATUS	Indicates the status of an application: Permit (PER), certificated, or a Claim of Vested Right (VST). If an application has been certificated, the Certificate number will be listed in the column.
MOU	The manner of use of the appropriated water. COM - Commercial STK - Stock IRR - Irrigation MM - Mining and Milling QM - Quasi-Municipal IND - Industrial REC - Recreational DOM - Domestic OTH - Other
OWNER OF RECORD	The owner of the water right as recorded in the files of the State Engineer. A water right may have more than one owner of record.
QQ	The quarter quarter of the Section in which the point of diversion is located.
QTR	The quarter of the Section in which the point of diversion is located.
SEC	The Section in which the point of diversion is located.
T	The Township in which the point of diversion is located.
R	The Range in which the point of diversion is located.
PER ACRES	The number of acres that are permitted to be irrigated.
DUTY (AF)	The number of acre-feet of water that the permittee may pump. One acre-foot equals 325,851 gallons.
SUPP ADJ	Where more than one permit is appurtenant to the same place of use, the permits are considered supplemental. Permits may be either completely or partially supplemental. In these cases, a total combined duty for the subject permits is employed. The values in this field are the supplementally adjusted duties for the permits.
UNIT	Acre-feet annually (AFA) and acre-feet seasonally (AFS). AFS limits water usage to certain months of the year.
DUTY USED	The amount of water used during the water year, in acre-feet, as determined by review of records and/or field investigation.
SUPP SRC	The source of the supplemental water; underground, or groundwater (UG), or Carson River (CR).
SUPP GW APP NO.	The file number(s) of any supplemental groundwater appropriations.

METHOD

The method used to estimate pumpage, or duty used, for the water year.

D - The acreage under cultivation multiplied by a duty of 4 acre-feet per acre.

E - The observed use during field investigation.

H - The number of hours the well was operated multiplied by the certificated or measured diversion rate.

M - Meter reading on a totalizing meter.

R - Reported pumpage

APPENDIX C

**CHURCHILL VALLEY WATER YEAR 2013 IRRIGATION BY GROUNDWATER
PERMITS AND CERTIFICATES**

Explanation of Column Headings for Groundwater Irrigation

APP NO.	The file number of the Application to Appropriate/Change Water.
STATUS	Indicates the status of an application: Permit (PER), certificated, or a Claim of Vested Right (VST). If an application has been certificated, the Certificate number will be listed in the column.
OWNER OF RECORD	The owner of the water right as recorded in the files of the State Engineer. A water right may have more than one owner of record.
QQ	The quarter quarter of the Section that is part of the place of use.
QTR	The quarter of the Section that is part of the place of use.
SEC	The Section that is part of the place of use.
T	The Township that is part of the place of use.
R	The Range that is part of the place of use.
PER ACRES	The number of acres, by quarter quarter, that are permitted to be irrigated.
PER IRR ACRES	The number of acres irrigated within the place of use of the associated permit during the water year, as determined by field inspection.
SUPP ACRES	The number of acres, by quarter quarter, that have more than one appropriation appurtenant.
SUPP SOURCE	The source of the supplemental water; underground, or groundwater (UG), or Carson River (CR).
SUPP APP NO.	The file number of the supplemental water; DCR stands for Decreed Carson River.
