6. LITHOLOGIC LOG

Material	Water Strata	From	To	Thickness
Measured static water level at 62.3'				
Measured depth of well at 360'				
Conducted video of well and found casing was collapsed at a depth of 360'.				
Remaining turbine pump was stuck in well at this depth. Installed 16" Mills Knife and perforated 6 rows per foot from 120' to surface. While perforating the casing seemed to be loose in hole. We removed cement pad from around top of well and found that the annulus was open from 250' to surface. We installed approx. 30 yards of 3/4" clean rock around annulus of casing up to 50'. We then poured in 8 yards of concrete grout in the remaining 50' to surface. The next day we installed 357' of 2" tremmie pipe and pumped in 25 yards of neat cement to fill the well.
