6 Additional Notes or Comments

Measured static water level at a depth of 14.34' and depth of well at 33'. Blew debris from well to depth of 38'. Installed 6" Mills Knife and perforated 6 rows per foot from 16' back to surface. We then installed 35' of 2" tremme pipe and then mixed 12 bags of Portland Type II cement with approx. 70 gallons of water and pumped through tremme pipe from bottom of well to the surface. Actual casing volume should have required 7 cubic feet but actually used 12.5 cubic feet.
