6. LITHOLOGIC LOG

Material	Water Strata	From	To	Thickness
Lake Lahontan type sediments from 0 to 240 feet.				
A Few Boulders at the start of hole.				
This was a test hole to determine if a hot zone was continuous under this area. At 200 to 240 feet the hole became quite hot so the hole was terminated. A small flow of water was encountered, but was not measured.				
Mud circulation was used, so a continuous log of sediment types could not be made.
