6 Additional Notes or Comments
 Removed small submersible pump from well. Measured depth of well at 80'. No water was encountered. We installed 2" pipe to 80' and tried to blow debris from well, but could not get any debris out. It felt as if we had a hard bottom. There was no water in the well, so we perforated the casing from 60' to surface with 6 rows per foot with Mills Knife. We still had no trace of water. We then mixed 45 bags of cement with approx. 230 gallons of water and filled the well with neat cement to the surface.
