RE: Goldfield Mining

January 15, 1986

Dear Tom:

Please find the following information pertaining to the plugging procedure of the abandon well at Goldfield Mining.

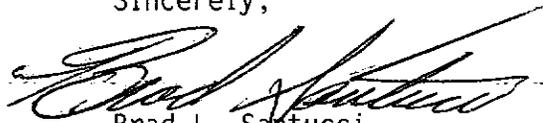

Step #1

Upon completion of the well, the decision was made to abandon, so we took the velocity of mud up to 50+ on 11-18-85, 10" hole.

Goldfield requested we put a cap over the well and go on to complete drilling project, before formal abandonment. I went back to the well on 1-13-86, pulled the cap and sounded the well with string and dead weight, and the mud level was found at 211 ft. and there was no water on the top of the mud. On 1-14-86, approx. 4+yards was put into the hole to fill to the top. Because there was no water in the hole, cement was poured in from the top. The balance of the truck load of cement was put into the production well for the 50 ft. cement seal.

If you have any further questions, please don't hesitate to contact me.

Sincerely,

Brad L. Santucci
Drilling Division
