Dear Steve:

RE: Well Abandoning at ACH-Dayton Project Site
(sec. 5, T.17 N., R.22 E., Lyon Co., NV)

As I mentioned on the phone this afternoon I am herewith enclosing a map of the wells at the above noted site that we are currently in the process of abandoning. Wells to be abandoned are: PW #1, MW #2, MW #3, MW #4, MW #5, MW #6, MW #7, MW #10, MW #11, MW #12 and MW #13. As most of the collars of these wells have concrete or neat cement seals it will not be possible to pull the casings. They are being perforated with a Mills perforator (3 holes) each foot of their length. They will then be plugged with neat cement and the casings cut off at ground level. We are using Marcin & Sons as our licensed driller. All work will comply with the regulations of 534.420.

Monitor well MW #13 was used as an injection well at the end of an underground pipeline. Consequently, the top of the casing is in a sump and is currently about 6 ft below the natural ground surface. It will be perforated and cemented as the other wells are but the casing will be cut off at the current sump floor (about 7 1/2 ft below natural ground surface). The sump walls, a 4 ft diam. culvert, will then be removed and the sump filled with the soil removed in its construction.

Monitor wells MW #1, MW #8, MW #9 and MW #14 are being retained for continuing monitoring under a post-operations closure plan approved in a letter from Thomas J. Fronapfel (NDEP) dated 22 January 1990.

S. Walmsley (NDWR)

26 March 1990

The two water wells are being left on the site for the owner of the property, Mr. Robert H. Hughes. I do not know what he intends to do with them.

If you have any questions please feel free to call me at the above number or at my home number, 355-7022.

Yours truly,
