Dear Sir:  
RE: Mr. Peterson's Well

The hole was drilled to 370'. There were aquifers in this range that would produce a good quantity of water. But the water in these aquifers are of a bad quality. So we abandoned the hole. We circulated a bentonite slurry from 370 ft to the top of the hole. We then let that set overnight. We put a plug at 50 feet and circulated neat cement from 50' to the top of the hole.

The well is on the NW 1/4 of the SW 1/4 section 35
