October 1, 1991

Gentlemen:

This letter is in reference to the abandonment of the well at 5650 Workman Road, Fallon, Nevada.

Info: Well owner: Dave Milkes
legal description: SW 1/4 of the SW 1/4 Sec. 5 T 19N R28E
in Churchill County

On October 1, 1991, We sat the drill up on the well. The static water level in the casing was 57' below land surface. We mixed neat cement and pumped it in the casing (there is no cap on the bottom). We then proceeded to pull the casing. There was 7' of cement grout in the hole for a seal. We pulled a total of 58' 2" of casing from the hole. There are 10 slots for perforations cut with a torch. They were completely sealed off, thus preventing water from entering the well. The cement was left approximately 2' from surface level. There were 18 bags of cement used in the plugging process. This was the completion of the abandonment process for this well.

Sincerely yours,

Derild Parsons
