On July 21, 1993 Parsons Drilling, Inc. moved on site for Nas Fallon to Plug a construction well adjacent to NAS Fallon Training Range B-20. Located in the SE $\frac{1}{4}$ of the SE $\frac{1}{4}$, Section 26 T25N, R31E. ~~R31E~~ R32E. The well was 228 feet deep with casing 8 5/8" in diameter. Parsons Drilling, Inc. perforated the casing with a Holte Down Hole Perforator from 0 to 150ft. No surface seal was present around the 8 5/8" casing.

Parsons Drilling, Inc. used bentonite fluid to plug the well from 50 to 228 ft. Bentonite fluid circulated until uniform at 42 viscosity then enough bentonite fluid was added to bring viscosty up to 62 viscosity with a mud weight of 9 $\frac{1}{2}$ pounds per gallon.

A plug was set at 50 ft and the top 50 ft of casing was plugged with neat cement using 90 bags.

Sincerely,
Douglas Parson
