Dear Tom Galagar,

On March 19, 1992, we abandoned a 6" stockwell located (NE 1/4, SW 1/4, Sec. 35, T 31, R 67). The reason this well was abandoned was due to the deteriorated state of the casing. When I pulled the cylinder pump out, the top three feet of the casing came up with the four inch pump. After the remainder of this pump was pulled, we could see additional casing laying over into the well. Both my hoist perforator and mills knife require close tolerance in the casing, so due to the probability we could never get the tool down this hole and the probability of never getting it back, we stuffed 180 feet of tremmie pipe down the hole and grouted the well up to the surface.

Sincerely,

R. D. Reynolds
