Re: Well Abandonments Floka, Antelope, Golconda 1

Dear Tom Gallagher:

Three wells were abandoned by Reynolds Drilling for the Union Pacific Railroad, locations, descriptions, and methods of abandonment are listed below.

Floka Site (SE 1/4 SE 1/4 Sec. 12 T35N. 29E. was found to be a 4" cased well 80' deep - static level stood at 78', casing appears to be deteriorated - unsuccessful attempt was made to pull casing. Seven cast boosters were placed at 10 ft. intervals from the bottom to within 10 ft of the surface and detonated. The charge nearest the surface shredded 4' of casing. assume the others did also. The hole was then filled with grout.

Basin # 028
Humboldt
County

Antelope Site (Sec 20 T35 R31) Found well log describes a 305' 10" dry hole. We cleaned this hole out down to 50' and filled with grout.

Basin # 028
Humboldt City

[Redacted] Dug well said to be installed in 1909. The hole measured 14' x 14' square and 20' deep, static water level stood at 11ft. 5". We pulled most of the 3" x 12" redwood timbers out of this hole and filled the hole up with concrete.

Basin # 090
Humboldt
County

Sincerely,

R.D. Reynolds Drilling
