We drilled this well and pumped a 100' seal. Upon completion, we air developed the well. We only had about 1 GPM and an abundant amount of sand that would not clear up. We then mechanically perforated the well from 100' to 214' (top of factory perf) and redeveloped. Still very little water and a lot of sand. We then abandoned the well by pumping approximately 3.5 cu. yards of neat cement from bottom to the top and cut the top of the well down.
