Exhibit "A"
Esmeralda County Protest of Application No. 86141T

The grounds of Esmeralda County's Protest are respectfully set forth below.

1. Intor Resources Corporation application 86414T seeks to transfer a 1,769.95 af/yr duty to a point of diversion that is approximately 1-1/2 miles south of the existing Esmeralda County municipal wells that are relied upon to provide municipal water to the community of Silver Peak. The county provides municipal water service under water right permits 29728, 44248, 49805, 52917, 69220, 76343, and 77966 (subject to pending application 85617). Esmeralda County is concerned that additional pumping, particularly of the magnitude sought in the application, will induce saline groundwater from the valley floor aquifer into the area of the municipal wells. The proposed pumping may degrade the quality of water in the aquifer and potentially jeopardize municipal water supply. Drawdown induced from proposed pumping may be detrimental to the operation of the County's wells, and could cause levels of land subsidence that are damaging to existing county facilities.
2. Insufficient details are provided of the proposed mining and milling operation and use of groundwater. If it is the intent to the application to support exploration well drilling and testing, then the magnitude of the temporary water right transfer should be limited to only a small duty necessary to undertake testing. Esmeralda County requests that the State Engineer require such information to enable an informed decision before considering any additional water right duties being transferred to the location.

Based on the foregoing, Esmeralda County requests that the State Engineer deny application 86141T, unless sufficient information is provided to ascertain potential long-term effects to fresh water resources relied upon by the County to provide municipal water to Silver Peak, and assurances are made that the fresh water relied upon will not be detrimentally impacted.
