 Air  Other \_\_\_\_\_

6. LITHOLOGIC LOG

Material	Water Strata	From	To	Thickness
Static water level was measured at 140'		0	152	
Attempt to pull casing was unsuccessful. A Mills knife mechanical type perforator was used to perforate the casing from 150' back to 50' with four perforations per foot. Perforator knife would not penetrate casing from 50' back to surface, indicating a successful sanitary seal by the prior well driller. 26 sacks cement with 2 sacks of bentonite mixed for neat cement. Mix was then pumped through 1 1/4" tremmie from 152' back to surface. Left set overnight then topped off next day. 6" steel casing was cut off 18" below ground surface.
